

Sorry for the inconvenience I will try to improve it

Netlify link – its just an overview backend is not connected

Link - <https://twitter-clone-without-backend.netlify.app/>

Github repository link - don't know how to connect github to netlify of react app

Link - <https://github.com/AbhyanshuPandeyji/Twitter-clone.git>

Thought note:

Its Been a Hard and Exciting journey to be a part of this community and work with it .

This is been very difficult for me to create solely because I don't know that much of the techs and how to usually work with backend but I tried to learn a lot while creating it.

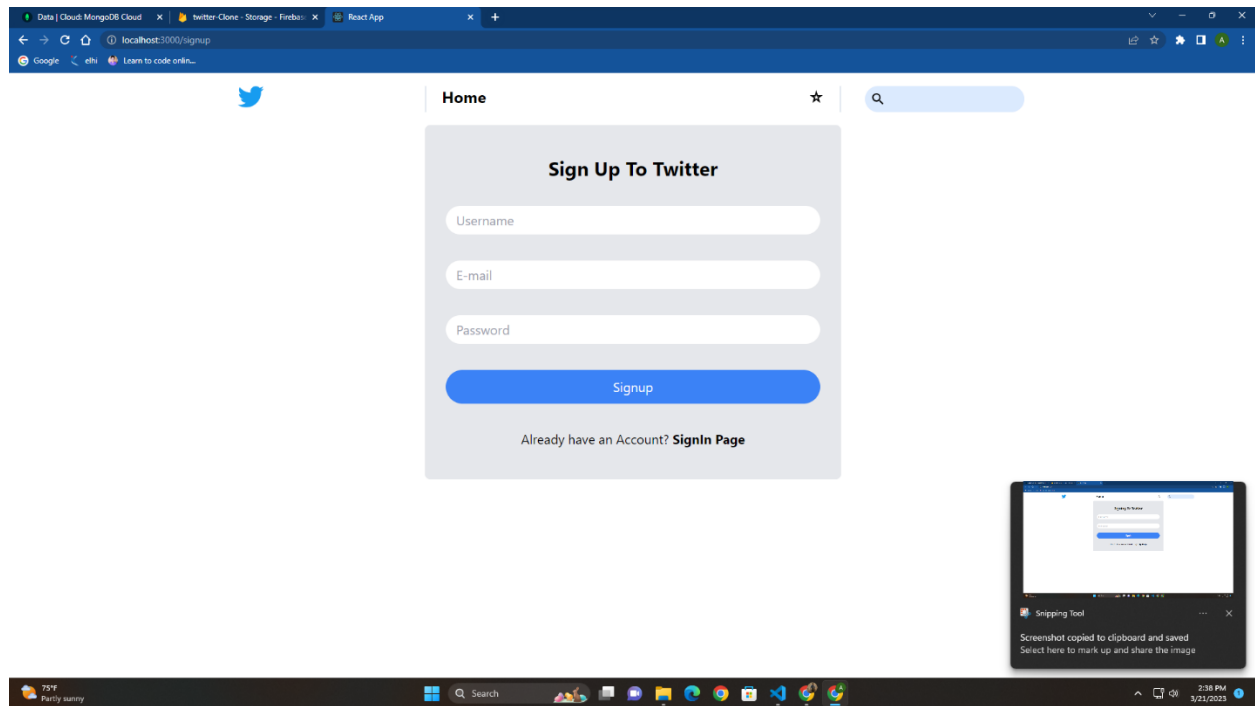

I had many difficulties like:

- How to hit API from front end to backend
- How to connect backend to front end
- How to manage states of the app
- How to apply authentication to the things
- How to create API's and fetch data
- There are some lack of functionality but I Will try to include it later and work on it
- There is one issue Which is delete account it works but the profile does not logout and navigate to signin page I will try to look into it later

All in all its been a very wonderful journey and I learned a lot from the teachers and the peers form this course - and I will continue my developer journey no matter what the result will be , Thankyou to all of you for this wonderful opportunity.
